Editor's farewell message

Xuming He writes: My term as Editor ends with this very issue. Ten times a year, I worried about whether the *Bulletin* would go out on schedule, both electronic and print versions, and whether enough of our members would find the contents interesting and informative. Those worries however never turned into headaches. In fact, I had something to look forward to each time, thanks to our excellent editorial team and enthusiastic contributions from our members. No wonder I have become a little nostalgic as I complete my four years of editorship.

The *Bulletin* provides a place to remember the past. We publish obituaries of our Fellows, members, and significant friends of the IMS. Our society is built upon on their legacy. This year, we celebrated the 75th anniversary of the IMS by a number of special articles contributed by some of our senior members, who told us how important the IMS has been to their professional lives. If you missed any, these issues of the *Bulletin* can be found at <http://bulletin.imstat.org>. As Editor, my heart also beats with the younger members of our profession. From the profile of new faculty at the North Carolina State University in the January/February 2007 issue to our report on the CAREER awards to four junior faculty members at Georgia Tech in the last issue, I hope that we have made a point that the *Bulletin* is also a place for the future.

I always want your voices to be heard. Through Member's News, Members' Discoveries, Letters to the Editor, and special issues on topics of interest, the *Bulletin* is a place to share news, honors, and opinions in our community. It is clear from each issue of the *Bulletin* that our community is growing with hope and vigor.

I would like to thank our Contributing Editors, Peter Bickel, Louis Chen, Rick Durrett, Nicole Lazar, and Terry Speed, for staying with me for four years. They helped in many ways by contributing articles, and providing leads, ideas, and equally importantly, courage to me as Editor. Terence's Stuff has become a page of choice for many, and Rick's Ramblings add an interesting dimension to our columns.

When I meet colleagues from east to west, I am often asked how the *Bulletin* is edited, and how I decide what to publish. There's no doubt that our members care about the *Bulletin*. My short answer is that Tati Howell, our Assistant Editor, magically puts all the material together. I have enjoyed working with her, and am very grateful for her dedicated editorial work month in, month out. My gratitude also goes to my home department at the University of Illinois at Urbana-Champaign for its continual support and to my wife and children who believe in what I do for the profession. It is my family, colleagues, and friends who have made it possible for me to complete my editorship without interruption to my regular duties as a professor.

I bring the good news that Dimitris N. Politis will assume editorship from January. I know that he is excited about making the *Bulletin* a better publication. It is a great time for me to move on to focus on other duties and responsibilities. Of course, I will be reading, and possibly writing for, the *Bulletin* for many more years to come!

IMS members' news

C R Rao receives India Science Award

C. R. Rao has received India's highest science award from the Prime Minister of India, Dr Manmohan Singh. The India Science Award recognizes major contributions of a path-breaking nature in any branch of science, engineering and medicine.

The award consists of a gold medal, a plaque with photo and citation, and an award of Rs.25 Lakhs (US\$55,000).

C R Rao [left] receives the India Science Award from the Prime Minister, Manmohan Singh [right]

Pranab K. Sen on film

On the University of North Carolina at Chapel Hill Gillings School of Global Public Health website, <http://www.sph.unc.edu> there is a 30-minute video interview with IMS Fellow **Pranab K. Sen**. The video, "A conversation with P. K. Sen," introduced by John Preisser, Research Professor in the Department of Biostatistics at UNC Gillings School of Global Public Health, is a conversation between Professor Sen and Malay Ghosh (University of Florida) and Michael Schell (H. Lee Moffitt Cancer Center, Tampa, Florida).

A screenshot from the video

Adrian Smith listed in *The Times* 'Eureka 100' list

IMS Fellow Professor **Adrian Smith** is listed in the UK newspaper *The Times* "Eureka 100: The Science List" (in the October 2010 Eureka). This "admittedly unscientific" list set out to find the 100 most important people in British science and engineering—and yet they listed only one statistician!

Igor Vajda: 1942–2010

Dr. Igor Vajda, Principal Researcher at the Institute of Information Theory and Automation of the Czech Academy of Sciences in Prague, died on May 2, 2010, aged 67. He was a leading figure in the area of information-theoretic statistical inference and published extensively in many statistical journals on this and other topics. He was the author of the book *Theory of Statistical Inference and Information* (1989) and co-author (together with F. Liese) of the monograph *Convex Statistical Distances* (1987).

An obituary of Dr. Vajda will be published in a future issue.

IMS Awards

Nomination for Tweedie New Researcher Award

Deadline: December 1, 2010

To present the Tweedie New Researcher Invited Lecture at the Fourteenth Meeting of New Researchers in Statistics and Probability, immediately preceding next year's JSM in Miami, Florida. Details at <http://imstat.org/awards/tweedie.html>

Nomination for IMS Fellowship

Deadline: January 31, 2011

In order to qualify for Fellowship, the candidate shall have demonstrated distinction in research in statistics or probability, by publication of independent work of merit. This qualification may be partly or wholly waived in the case of:

- 1 a candidate of well-established leadership whose contributions to the field of statistics or probability other than original research shall be judged of equal value; or
- 2 a candidate of well-established leadership in the application of statistics or probability, whose work has contributed greatly to the utility of and the appreciation of these areas.

Candidates for fellowship should be members of IMS on December 1 of the year preceding their nomination, and should have been members of the IMS for at least two years.

Electronic submission is highly encouraged. Please read all the details at <http://imstat.org/awards/fellows.htm>

Laha Awards for travel to JSM Miami

Deadline: February 1, 2011

Travel awards for students and new graduates are available for travel to the IMS Annual Meeting, which will be at the 2011 Joint Statistical Meetings in Miami Beach, Florida, from July 30 to August 4. Information about the JSM is at <http://amstat.org/meetings/jsm/2011/>

With funds from a generous bequest by the late Professor Radha Govind Laha, IMS established the Laha Awards to provide funds for travel to present a paper at the IMS Annual Meeting. First priority to students, second priority to New Researchers within 2 years of PhD at the date of the meeting. Applicants must be members of IMS, though joining at the time of application is allowed. Student membership is free and New Researchers also qualify for substantially reduced rates. You can join online at <https://secure.imstat.org/secure/orders/IndMember.asp>

Grants provided to Laha awardees have been typically around US\$500 per award. The actual amount depends on the distance traveled to the IMS meeting. Grants will be reimbursed against receipts and may be combined with other sources of funding.

Details of how to apply are at <http://imstat.org/awards/laha.html>

Carver Medal for exceptional service to IMS

Deadline: February 1, 2011

Nominations are invited for the Carver Medal created by the IMS in honor of Harry C. Carver, Founding Editor of the *Annals of Mathematical Statistics* and one of the founders of the IMS. The medal is for exceptional service specifically to the IMS and is open to any member of the IMS who has not previously been elected President. The medal will be awarded at a ceremony during the next IMS Annual Meeting, in Miami Beach, Florida (see <http://amstat.org/meetings/jsm/2011/>).

Details of the nomination process are at <http://imstat.org/awards/carver.html>

Other Awards: nominate now

2011 Mahalanobis International Award in Statistics: Call for Proposals of Candidates

The Indian Ministry of Statistics and Programme Implementation, representing the Government of India, is continuing its biennial initiative to award the Mahalanobis International Award in Statistics in memory of the eminent Indian statistician Professor P.C. Mahalanobis.

The Award is to be given to a selected statistician from a developing country (as defined by the United Nations) who has worked there in recognition of his/her lifetime achievement in Statistics and the promotion of best statistical practices. This initiative serves the double purpose of keeping the memory of P.C. Mahalanobis alive and of recognizing and stimulating progress in Statistics in developing countries.

The previous winners of the Award are Professor C.R. Rao (India) in 2003, Professor Benjamin Kiregyera (Uganda) in 2005, Dr. Isidoro P. David (Philippines) in 2007, and Professor Pedro Morettin (Brazil) in 2009.

At the request of the Indian Minister, the International Statistical Institute (ISI) has asked the ISI Mahalanobis Committee, chaired by Professor Vincenzo Esposito Vinzi (Italy), to propose a candidate for the 2011 Award.

The Mahalanobis International Award in Statistics consists of:

- 1) An economy class return flight ticket to the 58th ISI World Statistics Congress Dublin
- 2) A per diem payment for accommodation and other living expenses while in Dublin
- 3) An monetary award of US\$5,000

The 2011 Award will be presented at the ISI World Statistics Congress in Dublin, Ireland, 21–26 August 2011.

The Mahalanobis Committee on International Award in Statistics invites you to propose a candidate to the Committee, with reasons supporting the proposed candidate and the proposed candidate's curriculum vitae. Candidates can nominate themselves for the Award, accompanied by a support of two referees. Candidates can also be proposed by their organisation, academic institution, National Statistical Office or National Statistical Society.

Please send proposals, with supporting documents, to Ms. Shabani Mehta at the ISI Permanent Office [e s.mehta@cbs.nl](mailto:s.mehta@cbs.nl) before **10th January 2011**.

About Professor P.C. Mahalanobis

Professor P.C. Mahalanobis' contribution to the subject of statistics is incredibly varied. Mahalanobis had held the position of Statistical Advisor to the Government of India and Member, Planning Commission, beside many other distinguished appointments. The formulation of the D²-Statistics, derivation of its properties and its application are some of his most profound contributions.

He received the Weldon Medal from Oxford University in 1944 and was elected a Fellow of the Royal Society, London, in 1945 for his fundamental contributions to statistics, particularly in the area of large-scale sample surveys. As Chairman of the United Nations Sub-Commission on Statistical Sampling, a position to which he was appointed in 1947, he tirelessly advocated the use of sampling methods to be extended to all parts of the world. As the Chairman of the UN Statistical Commission, he also helped in the spread of robust and extremely useful statistical ideas to other countries. As a pioneer to government planning, his background to a number of initiatives in de-centralised planning is meritorious, one of them being the setting up of the National Sample Survey (NSS) entrusted with key responsibilities for the design, collection and analysis of sample survey data.

ASA Section on Statistics in Defense and National Security: Distinguished Achievement Award

The ASA Statistics in Defense and National Security (SDNS) is seeking nominations for the SDNS Distinguished Achievement Award. This annual award is given to a member of the statistical community in recognition of an outstanding accomplishment or a record of sustained contributions at the intersection of the statistical profession and national defense or national security. The award will be presented at the 2011 Joint Statistical Meetings in Miami, Florida. Any member of the section is allowed to nominate.

A nomination should include a short description of the basis for the award, contact information for both the nominator and the nominee, and suggested text for the certificate. A maximum of five seconding letters submitted in PDF form are welcome. This recognition does not include a financial award. Please be aware that unsuccessful nominations from previous years are not carried forward to the next year; therefore, each year, new nomination packages should be prepared for previous nominees. Electronic nominations are preferred and may be emailed to Patricia Jacobs [e pajacobs@nps.edu](mailto:pjacobs@nps.edu). The deadline for nomination is **March 15, 2011**. Please refer questions to Professor Patricia Jacobs at the above email address.

OBITUARY: Julian Besag, FRS

1945–2010

JULIAN BESAG, FRS, died on 6 August in hospital in Bristol, UK, following surgery after some years of ill health. His contributions to statistical methodology are profound. While always quick to repudiate any suggestion that he was a “mathematical statistician”, he possessed deep insight into the mathematical structure of stochastic models, which enabled him to make original and creative discoveries.

Julian’s research work had authority and great originality, often challenging convention, and has far-reaching consequence. He seldom wrote the last word on a subject, but was there at the start of many of the key developments in modern stochastic modelling, including some that became central to modern Bayesian modelling and computation. He did not write a great deal, but his work was deliberate, and densely and painstakingly written; he had very high standards over what he put his name to.

The area where he made the biggest impact is the conditional modelling of spatial systems. Together with the parallel work on interaction in contingency tables by Darroch, Lauritzen and Speed, Julian Besag’s work in the 70s and early 80s laid the foundations for the entire contemporary tradition of highly-structured stochastic systems. This strategy for building complex global models through local specifications guaranteed to be self-consistent has made a huge impact on stochastic modelling in many areas of science, medicine and technology, and stimulated important work on statistical inference for such systems, and on their probabilistic theory.

What began in his early work as a quest for flexible and mathematically-sound models for ecological phenomena, resulting in the notion of modelling spatial systems as Markov random fields, led on directly

to the idea of MRFs as a generic model for interacting systems, with Julian himself responsible for adapting the models and the methodology to agricultural field trials, archaeological problems, image analysis and disease mapping, and to hierarchical versions of such models under the Bayesian paradigm. These application areas were not, for Julian, simply sources of convenient illustrative examples—a style of working of which he strongly disapproved—but substantive contributions.

The second major plank to his research was innovative work on inferential methods for spatial systems, and their computational implementation. Especially noteworthy are the notion of pseudo-likelihood in interacting systems, as a computationally tractable alternative to true likelihood; the ‘iterated conditional modes’ algorithm; important contributions to the algebra of interacting systems; and his role as a very early proponent of Markov-chain Monte Carlo methods for fitting statistical models. He was ahead of his time in recognizing the duality between the conditional specification of stochastic models and the construction of algorithms for such models using these conditional specifications.

Julian was generous with his time, and an inspiring but challenging mentor to younger researchers; he has a string of papers written jointly with more junior people, most of whom have since developed into independent researchers with substantial reputations of their own.

Julian was born in Loughborough, UK, on 26 March 1945, and after his mother died, was brought up by German-speaking grandparents. He began studying engineering at Cambridge but moved to the University of Birmingham to study statistics, obtaining his BSc in 1968. He

Julian Besag on board his boat

then spent a year as a research assistant to Maurice Bartlett in Oxford before obtaining a lectureship at Liverpool. He spent a year as a sabbatical visitor at Princeton, where he was greatly influenced by John Tukey’s innovative approaches to data analysis, before moving to a readership in Durham; he became a professor in 1986. He was a visiting professor at the University of Washington in Seattle during 1989–90 and, after a year back in Newcastle, returned to Seattle long-term. He officially retired from Seattle in 2007 but remained an emeritus professor. He returned to the UK, and in 2007–09 he held a chair at the University of Bath. At his death Julian was a visiting professor at Bath and Bristol.

Julian was elected a Fellow of the Royal Society in 2004, and of the IMS in 1991. He gave an IMS Special Invited Lecture in 1992. He served as a member of Council of the Royal Statistical Society, and co-chaired the panel that wrote the comprehensive report on *Spatial Statistics and Digital Image Analysis* (NAS, 1991).

Outside his working life, Julian’s passions were mountaineering (he scaled a 14,000-foot peak on his honeymoon with Valerie), field hockey, running, and sailing. He lived on the water in Seattle; after he retired to Bristol, he lived in a harbourside flat and relished watching the activity on the water. His personal relationships were often stormy and very demanding for all concerned, but he was an unforgettable character, who will be much missed.

Peter Green, University of Bristol, and
Peter Diggle, Lancaster University

OBITUARY: Hermann Witting

1927–2010

ON OCTOBER 5, 2010, Professor Dr. h.c. Hermann Witting passed away. He was a Fellow of the Institute of Mathematical Statistics, elected in 1968.

Hermann Witting was born on May 29, 1927 in Braunschweig, Germany. From 1946 onwards, he studied Mathematics in Braunschweig and Freiburg where he received his doctoral degree in 1953, for work on Fluid Dynamics, and his habilitation in 1957. He became a Research Fellow with the Statistics department at the University of California in Berkeley in 1958.

His American colleagues had convinced him that German science was particularly lacking researchers in the fields of Probability and Statistics. He decided to

enter this area and soon became a professor for Mathematical Statistics in Münster in 1962. In 1972 he moved to a position in Freiburg, from which he retired in 1992.

Hermann Witting was a leading figure in German mathematical statistics from 1960 onwards. He built up working groups in Münster and Freiburg and initiated the incorporation of statistics into the curricula of mathematics departments in Germany. His research interests ranged from test theory, nonparametric and asymptotic statistics, up to sequential analysis and design of experiments. He had more than two dozen doctoral students, more than half of whom went on to become professors. Many Oberwolfach meetings on Mathematical

Hermann Witting

Photo from the archives of the Mathematisches Forschungsinstitut Oberwolfach, Germany

and Medical Statistics were initiated and organized by him, supporting international exchange and cooperation.

With the death of Hermann Witting the statistical community has lost a generous person and highly respected colleague.

*Prof. Dr. Hans Rudolf Lerche
University of Freiburg*

OBITUARY: Hugh Daniel Brunk

1919–2009

DURING A DISTINGUISHED academic career at the Rice Institute; the University of Missouri; the University of California, Riverside; and Oregon State University, Dan Brunk made significant research contributions in probability, Bayesian analysis, and mathematical statistics, including pioneering work on isotonic regression. Professor Brunk died at his home in Corvallis, Oregon, on July 19, 2009.

Brunk was born in Manteca, California. He received a BA in mathematics from the University of California in 1940 and a PhD in mathematics from the Rice Institute in 1944. After two years in the navy, he began his academic career at the Rice Institute, as an instructor from 1946 to 1948 and as assistant professor from 1948 to 1951. He worked for one year as a mathematician

at the Sandia Corporation then joined the Mathematics Department at the University of Missouri from 1952 to 1961. Brunk spent two years as a professor in the Mathematics Department at the University of California, Riverside from 1961 to 1963, including one year as chairman, before returning to the University of Missouri in 1963, this time as chairman of the Statistics Department. In 1969 he left Missouri to join the Statistics Department at Oregon State University, where he remained for 18 years until his retirement in 1988.

Professor Brunk began his academic career as a mathematical analyst. His mathematical research included a series of papers in complex analysis dealing with Dirichlet series, meromorphic functions, and growth rates of functions with zeros

Hugh Daniel "Dan" Brunk

or poles on the positive real axis. Another series of papers involved problems dealing with approximation theory, convex analysis, and compactness properties of monotone functions. He also took an interest in

Continues on next page

Hugh Daniel Brunk, 1919–2009

Continued from previous page

problems in probability that dealt with laws of large numbers and ergodic theory. He contributed to fluctuation theory and, while in Denmark as a Fulbright Lecturer, extended results concerning the greatest convex minorant of a random walk.

In 1955 and 1958 he published papers that set the stage for his influential work on estimation in the presence of ordering. Brunk was the first to popularize the major topic of order restricted inference—for modeling the monotonic effect of dose on probability of death in bio-assay, for example—and articulated the power benefits obtained by accounting for order information. In the early days, statisticians referred to the practice of “Brunkizing” estimates to meet order restrictions. Eventually, this became known as isotonic regression. Brunk’s contribution in this area culminated with the classic 1972 monograph *Statistical Inference Under Order Conditions* by Brunk, Barlow, Bartholomew, and Bremner (“the four Bs”). Characteristically, Brunk recognized and developed the mathematical elegance of order restricted

inference, leading to many foundational papers such as “Conditional expectation given a σ -lattice and applications,” “A generalized Radon-Nikodym derivative,” and “Generalized means and associated families of distributions.”

At Oregon State, Professor Brunk turned his attention to estimating probability densities of quantiles and to Bayesian analysis. His body of work is remarkable for its breadth, scholarly elegance, and clarity; and for a long list of distinguished collaborators. Brunk was known to a wider audience through his successful text *An Introduction to Mathematical Statistics*.

Brunk was a fellow of IMS and ASA, and was an elected member of the International Statistical Institute. He also received a Carter Award at Oregon State University for outstanding teaching in the College of Science, as well as an Oregon State University Statistics Student Organization award for “significant contribution to the educational experience of statistics students.”

Dan is remembered by his colleagues

at Oregon State as charming, cheerful and inspirational; and for his uncommon generosity. The exceptionally warm and hospitable dinner parties at his house in the forest were unforgettable. Students remember him for his ability to write on the chalkboard with one hand while simultaneously erasing with the other, and for his tendency to climb stairs two-at-a-time. Dan loved music and sang in choirs, choral groups and light opera. He also enjoyed nature and liked to hike.

Dan was preceded in death by his parents; his sister, Ruth; and his first wife, Jean Young Brunk, who died in 1997. Survivors include his second wife, Jean; his daughters, Bridget Glidden and her husband, Derald, of California, Gretchen Armacost and her husband, David, of Massachusetts, and Heidi O’Riley of Colorado; three grandchildren; five great-grandchildren; one great-great-grandchild; his sister, Betty Kempf of Oregon; and his brother, Joe Brunk, of California.

Dan Schafer, Oregon State University, and Don Pierce, Oregon Health Sciences University

Nominations sought for NSF-CBMS lecturers/courses; deadline April 2011

To stimulate interest and activity in mathematical research, the National Science Foundation intends to support up to seven NSF-CBMS Regional Research Conferences in 2012. A panel chosen by the Conference Board of the Mathematical Sciences will make the selections from among the submitted proposals. In the 42-year history of this conference series, 326 such conferences have been held. Of the 50 or so conferences held in the years 2001–2010, only two were devoted to topics in statistics.

Each five-day conference features a distinguished lecturer who delivers ten lectures on a topic of important current research in one sharply focused area of the mathematical sciences. The lecturer subsequently prepares an expository monograph based upon these lectures, which is normally published as a part of a regional conference series. Depending upon the conference topic, the monograph is published by the American Mathematical Society, the Society for Industrial and Applied Mathematics, or jointly by the American Statistical Association and the Institute of Mathematical Statistics.

Support is provided for about 30 participants at each conference and the conference organizer invites both established researchers and interested newcomers, including postdoctoral fellows and graduate students, to attend.

For details, please see the website http://www.cbmsweb.org/NSF/2012_call.htm

A CHAPMAN & HALL BOOK

How to publish a book that you have no time to write...

Xiao-Li Meng writes: If you are amused or annoyed by the title, then it has served its purpose. It is, however, not a (completely) false advertisement. Other than perhaps a few natural-born writers, most of us never feel we are *ready*—time and energy wise—to write a book, despite our longing for a fan club. Whatever its topic, level, or length, a book requires a “love of labor” far deeper and more enduring than almost any other kind of writing. Rarely, however, can we find that magic chunk of time needed to satisfy our inner desire to display our expertise in the most elaborated form. There are always competing tasks, demanding less time or giving more instant gratification, or simply deadlines that do not budge.

Nevertheless, some of us have better time management skills, or greater writing facility. If you are one of those, let me put on my co-editor’s hat right away: the editorial board of the two new IMS-CUP (Cambridge University Press) series will be very pleased to hear from you—see the sidebar for contact information. Yes, I know the last thing you need is to feature on another Most Wanted list. But even (or perhaps especially?) seasoned authors can take advantage of new platforms for disseminating their labors of love to new readerships.

On the other hand, if you are like me, having suffered multiple miscarriages and still book-less, then the IMS-CUP series of monographs and compact textbooks might just be the progesterone you have been seeking. The series descriptions are chosen to reflect the “easier and easing” nature of these series. “Monograph” implies that we are not looking for “All of Probability” or “All of Statistics,” but rather your “monologue” in a cutting-edge area, your exploration of an interdisciplinary topic, or your formulation of a theoretical foundation. Similarly, “compact” signals that we don’t

seek textbooks with comprehensive coverage or elaborate presentations (e.g., hundreds of rote exercises, multi-media add-ons). Rather, we desire concisely-written lecture notes with suitably chosen exercises, in relatively advanced areas of probability or statistics, including statistical computation.

The intellectual aim is clear, we hope. Our discipline is the main driver of quantitative scientific enquiry. To meet this responsibility, and for our own health, we want to deepen our foundations even as we expand our horizons, to consolidate our achievements and fight the fragmentation that can come with growth. Given its mission, history, and membership, IMS is in a unique position to lead this endeavor, and these new series are designed as the society’s ambassadors on the research and pedagogical fronts. Ideal monographs and textbooks for these new series provide general pictures, lay initial foundations, pose challenging questions, inspire others to think deep, or encourage new perspectives. The first Monograph, Bradley Efron’s *Large Scale Inference*, and the first Textbook, Geoffrey Grimmett’s *Probability on Graphs*, embody these ideals.

The two new series replace and enhance the discontinued *IMS Lecture Notes—Monograph Series*, with more emphasis on the mutually-nurturing relationship between theory and applications, and with a new focus on the interplay and cohesiveness of algorithms, probability, and statistics—hence the three editorial streams, algorithms, probability and statistics. Furthermore, IMS chose to partner with CUP because of CUP’s mission of dissemination and extensive experience in interdisciplinary marketing, providing both series authors and our profession the greatest exposure beyond our traditional readership. The entire IMS-CUP editorial board therefore encourages you to take advantage

of the unique marketing power offered by CUP to maximize the impact of your labor of love on general scientific advancement.

I, of course, will practice what I preach: I will deliver one myself. Since the compact nature of these series does not permit me to invite you to bet that “my book is longer than yours,” how about, “my book is faster than yours”? If you publish in the IMS-CUP series before I do, I will buy you the glass of wine of your lifetime (or juice if you’re under 21) the first time I see you after publication. (So, I’d better hurry as otherwise I’ll have to go to work for Renaissance Technologies!)

So cheers, to all the books in gestation, with the new IMS-CUPs! (But don’t drink until you deliver, despite the new UK study on drinking during pregnancy!)

Terence's Stuff: Enduring values

Youden's *Technometrics* paper examined some values & intervals for physical constants that did not endure. Terry explores other values that *should* endure.

If you are a woman recently diagnosed with breast cancer in the developed world, the chances are that your tumor was given a test for over-expression of the protein HER2. If the test returned positive (HER2+), then, depending on your healthcare coverage and reimbursement policies, you would probably have been prescribed “*trastuzumab*” treatment. This treatment costs around US\$100,000/year, and will benefit HER2+ cases, but there is some risk.

A 2009 review of the US literature concluded that about 20% of HER2 tests gave the *wrong* answer. Three different types of test for determining HER2 status in breast tissue are approved by the US Food and Drug Administration, and tests can be performed in places ranging from small community laboratories to large central or reference laboratories. Perhaps unsurprisingly, whether or not your test got it right depends on the type of test performed, and where it was carried out. The same study found that up to 66% of *eligible* breast cancer patients, and up to 20% of women *being treated* with trastuzumab, had no documentation of a test for HER2 over-expression. Welcome to the real world of measurement and tests in medicine, with false positives, false negatives, and errors of the unknown kind, where the test wasn't carried out.

I don't need to tell you that there is more and more testing in medicine, including diagnostic tests, prognostic tests, and tests like the one above, for determining the appropriate treatment. Many people see

targeted therapies as the future, especially for the treatment of cancer, and it is all going to be based on tests, that is, on *measurements*. As statisticians we deal with measurements all the time, and we have many well-developed models and methods of dealing with measurement errors. There is even a branch of most governments dealing with measurement. In the US it is the National Institute of Standards and Technology, while the Bureau International des Poids et Mesures is the corresponding international body. These people are experts on issues such as the accuracy and precision of different measurement technologies, the design, conduct and analysis of experiments involving refined measurements, and the subtle problem of summarizing the total uncertainty (variance *and* bias) in the results.

I borrowed my column title from that of one of my all-time favourite papers, by the late W. J. Youden (in *Technometrics*, 1972). He found that not only did the values for physical constants such as the speed of light depend on the laboratory and the measurement method used (sound familiar?), but also that the reported error bars around the different determinations rarely overlapped. He sought values and intervals that *endured*.

Now the expression level of a protein in a tissue sample is hardly a physical constant, and its true value is unlikely to endure, but there is a new issue here. HER2 testing is carried out on a sample of breast tissue, a *biospecimen*. Before any testing can take place, a sample will have been affected by a large number of *preanalytical variables*: the state of the patient, medical or surgical procedures prior to sample acquisition, and those associated with the way in which the sample was acquired, handled, processed and stored. All of these variables have the potential to affect the measurement.

Here's a striking example. Very careful

measurements were made on a particular molecule that is present in liver tissue, after letting it sit for 0, 5, 10 and 15 minutes on a bench at room temperature. Significant effects were visible at 5 minutes, and by 15 minutes, it was hard to detect the molecule at all in the sample. In contrast, similar measurements on a different molecule in the same experiment were high and unchanged throughout the experiment. Not too surprising. But with modern assays measuring tens, hundreds or thousands of molecules, you can start to see the problem: which preanalytical variables associated with a biospecimen will affect a given molecular measurement, and in what way? The possibilities are almost endless, as there are scores of preanalytical variables and thousands of potential measurements.

Five years ago the US National Cancer Institute started a section devoted to the systematic investigation of these problems, the Office of Biorepositories and Biospecimens Research. Recently they convened a workshop consisting of biomedical and biospecimen scientists, standards/metrology scientists, commercial assay developers, experimental design and research methods experts, statisticians, and regulatory scientists. Its aim was to work towards developing fit-for-purpose quality assessment tools for the biospecimens used by the research community. As one of the handful of statisticians present, it was a delight to be in the company of so many people with a passion for quality assessment and the development of standards in measurement, and the dual aims of helping medical research and translating their results into clinical practice.

Enduring values indeed!

IMS meetings around the world

IMS-sponsored meetings

MCMSki  

January 5-7, 2011 Park City, Utah

<http://madison.byu.edu/mcmski/>

The fourth joint international meeting of the IMS (Institute of Mathematical Statistics) and ISBA (International Society for Bayesian Analysis) will be held at The Canyons resort in Park City, Utah, USA, from Wednesday, January 5 to Friday, January 7, 2011. The conference center is just 40 minutes from Salt Lake City airport and is readily accessible by public transport. The meeting will feature three plenary speakers (Nicky Best, Mike Newton, and Jeff Rosenthal), and five invited sessions from internationally-known experts covering a broad array of current and developing statistical practice. There will also be nightly poster sessions and one session of contributed talks reserved for young investigators (within 5 years of PhD).

TRAVEL SUPPORT: ISBA and NSF have committed to support young researchers presenting posters or contributed talks, with preference given to senior or advanced students active in research, and preferentially to students from economically-disadvantaged countries. As such, we encourage applications from young investigators from all parts of the world; see the "Student travel" tab on the conference webpage for details. Application deadline is October 22, 2010; winners will be notified by email shortly thereafter.

AdapSki 

January 3-4, 2011 Satellite meeting
Park City, Utah

<http://www.maths.bris.ac.uk/~maxca/adapski/>

This workshop is intended to provide an updated snapshot of recent methodological and theoretical advances in Monte Carlo methods with a strong emphasis on adaptive Monte Carlo methods in the broad sense. It will consist of four half-day sessions of 12 invited talks with discussions. As in the previous editions, it will include sufficiently long afternoon breaks to allow informal discussions, relaxation and skiing. There will be a poster session on the evening of January 3, please see the website for instructions. Registration is just \$50 for those also attending the main meeting.

2012 World Congress/IMS Annual Meeting

July 9–14, 2012

Grand Cevahir Hotel & Convention Center, Istanbul, Turkey

NEW WEBSITE: <http://www.worldcong2012.org/>

The eighth World Congress in Probability and Statistics will be held in Istanbul from July 9 to 14, 2012. It is jointly organized by the Bernoulli Society and the Institute of Mathematical Statistics. Scheduled every four years, this meeting is a major worldwide event for statistics and probability, covering all its branches, including theoretical, methodological, applied and computational statistics and probability, and stochastic processes. It features the latest scientific developments in these fields.

The program will cover a wide range of topics in statistics and probability, presenting recent developments and the state of the art in a variety of modern research topics, with in-depth sessions on applications of these disciplines to other sciences, industrial innovation and society. It will feature several special plenary lectures presented by leading specialists. In addition, there will be many invited sessions highlighting topics of current research interests, as well as a large number of contributed sessions and posters.

The venue of the meeting is Grand Cevahir Hotel & Convention Center located in Istanbul, which is a vibrant, multi-cultural and cosmopolitan city bridging Europe and Asia. Istanbul has a unique cultural conglomeration of east and west, offering many cultural and touristic attractions, such as Hagia Sophia, Sultanahmet, Topkapı Palace and Maiden's Tower.

On behalf of the Program Committee and the Local Organizing Committee, we invite you to join us in Istanbul for this exciting scientific event. Your participation will ensure that the 2012 World Congress will be a memorable meeting.

Elvan Çeyhan and Mine Çağlar, Co-chairs of the Local Organizing Committee

IMS-China International Conference on Statistics and Probability

July 8–11, 2011

XiAn, China

IMS Organizing Chair: Heping Zhang, Yale University

w <http://www.stat.umn.edu/~statconf/imschina2011/index.html>

We are pleased to announce the 3rd IMS-China International Conference on Statistics and Probability 2011 in XiAn, China. The first two meetings in this series were held in Hangzhou (2008) and WeiHai (2009), China.

The meeting is open to all current and prospective IMS members by registration, until the maximum of 150 non-local participants is reached. Local participants are defined as those who reside in mainland China. It will feature plenary lectures, and invited and contributed talks in all areas of probability and statistics. The official languages of the meeting are English and Chinese.

If you live in China, contact Professor Geng Zhi (zhigeng@pku.edu.cn) and Gong Fuzhou (fzgong@mail.amt.ac.cn) for more information. If you live in other countries, send your enquiries in English to Professor Heping Zhang (heping.zhang@yale.edu).

IMS Asia Pacific Rim Meeting

July 3–6, 2011

Tokyo, Japan

w <http://www.ims-aprm2011.org/>

The second IMS Asia Pacific Rim Meeting will take place in OMIYA Sonic City conference hall (<http://www.sonic-city.or.jp/modules/english/>), Tokyo, Japan during the period Sunday July 3 to Wednesday July 6, 2011. This conference is sponsored by IMS, The International Chinese Statistical Association (ICSA), The International Indian Statistical Association (IISA), The Japan Statistical Society (JSS), The Korean Statistical Society (KSS) and the Institute of Statistical Mathematics

(ISM). This meeting series provides an excellent forum for scientific communications and collaborations for the researchers in Asia and Pacific Rim. It also promotes communications and collaborations between the researchers in this area and those from other parts of the world. The program covers a wide range of topics in statistics and probability, presenting recent developments and the state of the art in a variety of modern research topics and in applications. Plenary speakers are Professor

Peter Hall (University of Melbourne, Australia), and Professor S.R.S. Varadhan (New York University, USA). A number of celebrated scholars will deliver distinguished lectures and invited talks in this conference. Details about distinguished lecture speakers, invited talk speakers and the key dates can be found in the website.

For more information, you may contact the program chairs: Byeong U. Park (bupark@stats.snu.ac.kr) and Runze Li (rli@stat.psu.edu).

NEW

The 25th New England Statistics Symposium

Saturday April 16, 2011

Storrs, Connecticut

[w](http://www.stat.uconn.edu/ness11) www.stat.uconn.edu/ness11

The Department of Statistics of the University of Connecticut will host The 25th New England Statistics Symposium on Saturday, April 16, 2011, to bring together statisticians from all over New England at a central location.

Invited keynote speakers are Brad Carlin of University of Minnesota and Jun Liu of Harvard University. There will be two full-day short courses on April 15, 2011, entitled "Bayesian Adaptive Methods for Clinical Trials" presented by Professor Brad Carlin, University of Minnesota, and "Introduction to the Theory and Practice of Copulas" presented by Professors Ivan Kojadinovic, Université de Pau et des Pays de l'Adour, and Jun Yan, University of Connecticut. There will also be several arranged special theme sessions. In addition, there will be contributed paper sessions, allowing 15 to 20 minutes per paper.

We invite talks on all aspects of statistics and probability. Students are encouraged to submit papers for consideration of one of three **student awards** that are sponsored by the IBM T.J. Watson Research Center and Smith Hanley Associates LLC. Students must submit an application for consideration of award no later than Monday, April 4, 2011. Contact Professor Ming-Hui Chen, NESS, Department of Statistics, University of Connecticut, 215 Glenbrook Road, U-4120, Storrs, CT 06269-4120, telephone (860) 486-6984, for messages (860) 486-3414, E-mail: mhchen@stat.uconn.edu, Fax: (860) 486-4113. You can also register on-line at www.stat.uconn.edu/ness11.

NEW

Workshop on Statistical Challenges and Biomedical Applications of Deep Sequencing Data

June 5–10, 2011

Ascona, Switzerland

[w](http://www.cbg.ethz.ch/news/ascona2011) <http://www.cbg.ethz.ch/news/ascona2011>

The rapid development of new high-throughput sequencing technologies has opened new avenues for biological investigation on an ever-growing scale, and there is great interest among statisticians in the methodological challenges inherent in this quickly evolving domain. Addressing the new statistical demands is a prerequisite for sustained progress in biological and biomedical research predicated on these new high-throughput technologies.

This interdisciplinary workshop is intended to be a forum for (i) the dissemination of cutting-edge biotechnological and methodological developments and (ii) the identification of challenging data analysis problems. The focus is on statistical, mathematical, and computational aspects addressing concrete real-world biological questions and medical applications. Specific workshop topics include algorithms for the analysis of deep sequencing data, applications to infectious diseases and cancer, integration of heterogeneous high-throughput genomic data types, and advances in statistical computing for these problems.

Confirmed invited speakers include: Michael Brudno (University of Toronto), Chris Greenman (Sanger Institute), Willi Gruissem (ETH Zurich), Sunduz Keles (University of Wisconsin–Madison), John Marioni (EBI), Sach Mukherjee (University of Warwick), Ben Raphael (Brown University), Simon Tavaré (Cancer Research UK), Amalio Telenti (University of Lausanne), with others still pending.

Contributed presentations will also be welcome.

More details and pre-registration instructions are available at <http://www.cbg.ethz.ch/news/ascona2011>

We strongly encourage pre-registration, in previous years places have filled up quickly.

NEW

ISI Dublin**NEW****August 21–26, 2011****Dublin, Ireland****w** www.isi2011.ie

Registration is now open: see the website.

Water, food, energy, climate change, financial systems and urbanization are all sources of substantial global challenges. Statistics is central to the understanding of these challenges and to the development of productive responses to them. The 58th World Statistics Congress—the biennial meeting of the International Statistical Institute (ISI)—is unique in bringing together statisticians and probabilists from across the disciplinary spectrum: official statistics, surveying and sampling, computational & mathematical statistics, probability and stochastic modelling and education. Moreover, it brings together statisticians from developing nations and from developed nations to share experiences, expertise and challenges.

Dublin's acclaimed new convention centre is the venue for the ISI meeting

The 2011 meeting is an opportunity for this broad community to demonstrate its relevance to addressing global challenges and the directions and quality of its research. It will include presentations on recent research and applications, training for statisticians on key topics and a forum to discuss opportunities for work on important topics. It will also be an opportunity for statisticians and probabilists to identify new research topics and possible new collaborators.

Ha'penny Bridge across the River Liffey: one of Dublin's classic sights

An innovation in 2011 meeting will be a special Theme Day, during which all papers will address, from various statistical perspectives, “*Water, quality and quantity*”.

Dynamic Statistical Models: an ISI Satellite Meeting**NEW****August 17–19, 2011****Copenhagen, Denmark****w** <http://statistics.ku.dk/isi-satellite/>

As a satellite meeting for the 58th ISI meeting in Dublin 2011 (see above) the University of Copenhagen is organizing this meeting on Dynamic Statistical Models in the framework of the Statistics Program of Excellence; Statistical methods for complex and high dimensional models. The meeting will be held in Copenhagen, August 17–19, 2011.

The purpose of the meeting is to bring together researchers in statistics and related areas working with frontier research topics in statistics for dynamic models. The meeting is organized with a focus on the following themes: Causality in dynamic models; Functional data analysis; Stochastic differential equations; Neurophysiological processes; Gene regulatory processes; and Event history data

The list of invited speakers who have accepted includes André Fujita, RIKEN; Emery N. Brown, MIT; Jin-Ting Zhang, National University of Singapore; Mark van der Laan, UC Berkeley; Markus Reiß, Humboldt-Universität zu Berlin; Robert E. Kass, Carnegie Mellon University; Sara van de Geer, ETH; Shuangge Ma, Yale; Stijn Vansteelandt, Ghent University; Torben Martinussen, University of Southern Denmark.

The form of the meeting will be a combination of invited, plenary talks and contributed sessions. Detailed information about the conference and registration will be available on the website <http://statistics.ku.dk/isi-satellite/>

Seventh International Conference on Multiple Comparison Procedures**NEW****August 29 – September 1, 2011****Washington DC, USA****w** <http://www.mcp-conference.org>

The 7th International Conference on Multiple Comparison Procedures will be held at the Hilton Rockville Hotel, MD.

The main goal of the conference is to promote research and applications of multiple comparison procedures. The application areas of multiple comparison procedures are a rich and important source of cross-disciplinary statistical research. The conference will cover many current topics such as adaptive and sequential designs, Bayesian methods, bioinformatics, clinical trials, genomics, closed testing and partitioning principles, false discovery rate, multiple endpoints and so on. An important role of the conference will be to provide a forum for technical interactions among research and practicing statisticians in academia, government, and industry.

Co-chairs: Sue-Jane Wang (Co-Chair, FDA, USA), Jason C. Hsu (Co-Chair, The Ohio State University, USA), Frank Bretz (Co-Chair, Novartis, Switzerland)

Employment Opportunities around the world

Hong Kong

THE HONG KONG UNIVERSITY OF
SCIENCE AND TECHNOLOGY

Department of Mathematics Faculty Position(s)

The Department of Mathematics invites applications for tenure-track faculty positions at the rank of Assistant Professor in all areas of mathematics, including one position in analysis/PDE. Other things being equal, preference will be given to areas consistent with the Department's strategic planning.

A PhD degree and strong experience in research and teaching are required. Applicants with exceptionally strong qualifications and experience in research and teaching may be considered for positions above the Assistant Professor rank.

Starting rank and salary will depend on qualifications and experience. Fringe benefits including medical/dental benefits and annual leave will be provided. Housing will also be provided where applicable. Initial appointment will normally be on a three-year contract, renewable subject to mutual agreement. A gratuity will be payable upon successful completion of contract.

Applications received on or before 31 December 2010 will be given full consideration for appointment in 2011. Applications received afterwards will be considered subject to availability of positions. Applicants should send a curriculum vitae, at least three research references and one teaching reference to the Human Resources Office, HKUST, Clear Water Bay, Kowloon, Hong Kong [Fax: (852) 2358 0700]. Applicants for positions above the Assistant Professor rank should send curriculum vitae and the names of at least three research referees to the Human Resources Office. More information about the University and the Department is available at <http://www.ust.hk>.

(Information provided by applicants will be used for recruitment and other employment-related purposes.)

Taiwan

Academia Sinica Institute of Statistical Science Regular Research Positions

The Institute of Statistical Science, Academia Sinica, is seeking outstanding candidates for regular research positions at the level of assistant, associate or full research fellow available in 2011. Candidates in all areas of Statistics will be considered. Candidates should have a PhD in statistics or related fields. Application materials must include (1) a curriculum vitae, (2) three letters of recommendation and (3) representative publications and/or technical reports. Additional supporting materials such as transcripts for new PhD applicants may also be included. Except for the letters of recommendation, electronic submissions are encouraged. Applications should be submitted to

Dr. Hsin-Cheng Huang
Chair of the Search Committee
Institute of Statistical Science, Academia Sinica
128 Sec. 2 Academia Road, Taipei 11529, Taiwan, R.O.C.
Fax: +886-2-27831523
E-mail: hchuang@stat.sinica.edu.tw

Applications should be completed by **December 31, 2010** for full consideration.

Assistant Professor of Applied Mathematics

The Department of Mathematics at ETH Zurich (www.math.ethz.ch) invites applications for an assistant professor position in applied mathematics. The vacant position is part of the Seminar for Applied Mathematics, SAM (www.sam.math.ethz.ch). The future professor should have an exceptional research potential in some area of applied mathematics. Particular attention will be given to numerical analysis and computational mathematics, preferably complementing current research directions at the SAM.

The prospective responsibilities of the successful candidate include research and teaching in numerical analysis and computational mathematics for students of mathematics, engineering and natural sciences on all levels. The new professor will be expected to teach undergraduate level courses (German or English) and graduate level courses (English). There is the possibility to lead his or her own research group within the SAM.

Assistant professorships have been established to promote the careers of younger scientists. Initial appointment is for four years, with the possibility of renewal for an additional two-year period.

Please submit your application together with a curriculum vitae and a list of publications to the President of ETH Zurich, Prof. Dr. Ralph Eichler, ETH Zurich, Raemistrasse 101, 8092 Zurich, Switzerland (or via e-mail as one single PDF to faculty-recruiting@sl.ethz.ch), no later than February 15, 2011. With a view towards increasing the number of female professors, ETH Zurich specifically encourages qualified female candidates to apply.

Assistant Professor of Mathematics

The Department of Mathematics at ETH Zurich (www.math.ethz.ch) invites applications for an assistant professor position in Mathematics.

Duties of this position include, in addition to research, an active participation in the teaching of mathematics courses for students of mathematics, natural sciences, and engineering. Candidates should hold a PhD degree or equivalent and have demonstrated the ability to carry out independent research work. Willingness to teach at all university levels and to participate in collaborative work both within and outside the school is expected. The new professor will be expected to teach undergraduate level courses (German or English) and graduate level courses (English).

Assistant professorships have been established to promote the careers of younger scientists. The initial appointment is for four years with the possibility of renewal for an additional two year period.

Please submit your application together with a curriculum vitae and a list of publications to the President of ETH Zurich, Prof. Dr. Ralph Eichler, ETH Zurich, Raemistrasse 101, 8092 Zurich, Switzerland (or via e-mail as one single PDF to faculty-recruiting@sl.ethz.ch), no later than January 15, 2011. Academic Career Opportunities

THE UNIVERSITY OF
CHICAGOPosition Title: **Assistant Professor**Req # **00553**

The Department of Statistics at the University of Chicago invites applications from exceptionally qualified candidates for faculty positions at the rank of Assistant Professor. We seek individuals doing advanced research with a basis in statistical theory, methodology, or probability. As part of a University of Chicago initiative, some applicants would be expected to work in scientifically focused computation or applied mathematics, but hiring is not limited to that initiative. It is expected that all successful applicants will engage in the direction of doctoral dissertations, as well as teaching at the undergraduate and graduate levels. Interdisciplinary collaboration will be particularly valued. While not all applicants need be specifically trained in statistics, they must have doctorates in statistics or some field of mathematics or science where statistical concepts or methods play an important role. Appointments may be made jointly with another department in the University. A demonstrated research excellence appropriate to the rank is essential.

Applicants must apply on line at the University of Chicago Academic Jobs website at <http://tinyurl.com/28fdnz7>, and must upload a cover letter and CV and arrange for three letters of reference to be sent to the Search Committee. Up to three relevant research publications may also be sent to the Search Committee. Application screening will begin no later than November 1, 2010; submission by December 1, 2010, will ensure consideration during this academic year, but the search will continue until all positions are filled or the search is closed.

Further inquiry and any requested information other than that uploaded should be sent to the Search Committee at search@galton.uchicago.edu or to Search Committee Department of Statistics, Eck 108 University of Chicago 5734 University Avenue Chicago, IL 60637. The University of Chicago is an Affirmative Action / Equal Opportunity Employer. <http://tinyurl.com/28fdnz7>

United States: Chicago, IL

Academic Career Opportunities

THE UNIVERSITY OF
CHICAGOPosition Title: **Director of Undergraduate Studies**Req # **00552**

The Department of Statistics at the University of Chicago seeks to appoint a Director of Undergraduate Studies at the academic rank of Senior Lecturer. This appointment, beginning no later than September 2011, will be initially for a three-year term, with the possibility of reappointment. The successful candidate will be responsible for coordination and development of the undergraduate program and will be expected to teach four undergraduate 10-week courses each year. Duties will include assignment and assessment of effectiveness of teaching assistants, training of new instructors (including graduate students as instructors), development or deployment of learning technology in the department and, together with the Departmental Counselor, advising undergraduates, including students majoring and minoring in Statistics, on course selection in the Department.

Applicants must have a PhD in Statistics, a broad knowledge of the field, and outstanding effectiveness and competence in teaching at the undergraduate level. Applications must include descriptions of previous experience in statistical research and in teaching. To ensure full consideration of your application, you should apply by December 1, 2010. Screening will continue until the position is filled.

All applicants must apply through the University's Academic Jobs website <http://tinyurl.com/2dceyeu>. A cover letter describing past statistical teaching and research experience, a curriculum vitae, and the names and contact information for three references must be uploaded to be considered as an applicant.

Requests for further information should be sent to search@galton.uchicago.edu. The University of Chicago is an Affirmative Action / Equal Opportunity Employer. <http://tinyurl.com/2dceyeu>

Assistant Professor

Applications are invited for a tenure-track Assistant Professorship in Statistics. Applicants with expertise in any areas of Statistics, particularly Bayesian methods or nonparametrics, are encouraged to apply. Preference will be given to candidates whose statistics research interests have biomedical and/or social sciences applications. The department has a graduate program offering both an MS in statistics and PhD degree with a concentration in statistics. The Department of Mathematical Sciences is dedicated to excellence in both research and teaching. Candidates should have strong research potential as well as the potential to make a significant contribution to the department's undergraduate educational mission. The standard teaching load is two courses per quarter. Completed applications consisting of a cover letter, CV, description of research program, description of teaching experience, and three letters of recommendation, should be submitted at <http://www.mathjobs.org/jobs/jobs/2457>. Applicants should also submit a CV and cover letter on UC's recruitment system www.jobsatuc.com/applicants/Central?quickFind=76301. Review of applicants will begin on December 15, 2010. Appointments will begin September 1, 2011. The position requires a PhD in-hand in the area of statistics or equivalent by September 1st, 2011. Inquiries concerning the position should be directed to Professor Shuang Zhang, Head, Department of Mathematical Sciences. Applications will be accepted until the position is filled. The University of Cincinnati is an equal opportunity/affirmative action employer. Women, people of color, the disabled and veterans are encouraged to apply. http://jobs.imstat.org/c/job.cfm?site_id=1847&jb=7283167

TEMPLE UNIVERSITY®

The Department of Statistics in the Fox School of Business at Temple University invites applications for Tenure-Track faculty positions at all levels. Qualified candidates must hold a Ph.D. in Statistics, publications in top-tier journals, proven record of teaching excellence, and strong theory/application background. Strong candidates in any area of statistics will be considered. Apply electronically to Dr. Sanat K. Sarkar, stat.recruiting@temple.edu, with cover letter, full CV, evidence of excellence in teaching & three letters of recommendation. Additional information is available from the department websites at: www.fox.temple.edu/dept/statistics/. Temple University is an Equal Opportunity/Affirmative Action Employer and specifically invites applications from women and minorities.

United States: Pittsburgh, PA**Faculty Position: Assistant Professor****Department of Statistics, Arts and Sciences, University of Pittsburgh**

The Department of Statistics at the University of Pittsburgh invites applications for a tenure-track position, pending budgetary approval. This position begins September 2011.

This position involves teaching, statistical research, and collaboration with investigators outside of Statistics. Strong preference will be given for research in computationally intensive methods, but any area of statistics will be considered.

Send CV, transcripts, and three recommendation letters before January 5, 2011 to: *Search Committee, Department of Statistics, 2717 Cathedral of Learning, University of Pittsburgh, Pittsburgh, PA 15260*. The University of Pittsburgh is an Affirmative Action, Equal Opportunity Employer. Women and members of minority groups under-represented in academia are especially encouraged to apply.

United States: Pittsburgh, PA**Carnegie Mellon University**

Applications are invited for possible tenure-track, lecturer, and visiting positions. Carnegie Mellon offers a collegial faculty environment, emphasizing a combination of disciplinary and cross-disciplinary research and teaching. All areas of statistics are welcome, and joint appointments with other units in the Pittsburgh area are possible. We especially encourage women and minorities to apply. Details at <http://www.stat.cmu.edu> (email: hiring@stat.cmu.edu). Application screening begins immediately and continues until positions closed. Send CV, research papers, relevant transcripts and three letters of recommendation to: *Chair, Faculty Search Committee, Department of Statistics, Carnegie Mellon University, Pittsburgh, PA 15213, USA*. AA/EOE.

United States: University Park, PA**Penn State University**

The Department of Statistics at Penn State seeks to fill multiple tenure-track positions at any level, to begin August 2011. Candidates with Ph.D. in statistics or related field who demonstrate excellence in research and teaching are encouraged to apply.

See <http://www.stat.psu.edu> for particulars. Please apply at mathjobs.org; or send letter of application, curriculum vitae, and three letters of recommendation to: Chair, Faculty Search Committee, Department of Statistics, 326-I Thomas Building, University Park, PA 16802-2111. Screening will begin November 15, 2010. Penn State is committed to affirmative action, equal opportunity and the diversity of its workforce.

Senior Faculty Position in Computational Statistics
 As part of a recognition of the increasing importance in the modeling and computational sciences, the Department of Statistics at Texas A&M University (<http://www.stat.tamu.edu>) is recruiting for a senior faculty position in computational statistics as broadly defined. This position is one of three new senior lines dedicated to computational science that were created as part of an initiative led by the Institute for Applied Mathematics and Computational Science (<http://iamcs.tamu.edu>). Considerable startup funding is available.

Computational science has become inherently multidisciplinary. As a result, successful candidates for this position should be able to demonstrate a strong record of research accomplishments and leadership, both within the statistics discipline and in multidisciplinary initiatives. Documentation of such success should include a record of publication in both statistics and a multidisciplinary application area as well as examples of collaboration and program building. Special emphasis will be placed on computational methods involving hierarchical modeling, uncertainty quantification and systems biology.

Texas A&M is a university of approximately 50,000 students and 3,000 faculty members. The Department of Statistics (37 members) is one of the largest departments in the US and is listed among the Top 5 departments from public institutions in the most recent rankings of US News and World Report. Additional information can be obtained by contacting the search committee chair at searchcommittee@stat.tamu.edu.

Individuals who wish to be considered for this position should send a copy of their CV and a letter of interest to: *Recruiting Committee Chair, Computational Statistics Search Committee, Department of Statistics, 3143 TAMU, Texas A&M University, College Station TX 77843-3143*. Electronic submissions will also be accepted and should be sent to searchcommittee@stat.tamu.edu, with Computational Statistics in the Subject Line. Additional information and letters of reference will be solicited after a preliminary review. Review of the applicant pool will begin January 15, 2011. Start dates are flexible and the position will remain open until filled.

Texas A&M University is an Equal Opportunity Employer and has a policy of being responsive to the needs of dual-career couples.

 July 11–22: Ithaca, NY. 7th Cornell Probability Summer School. **NEW WEBSITE** <http://www.duke.cornell.edu/~rtd/CPSS2011/>

July 18–19: Vancouver, Canada. ICIAM 2011: AWM Workshop for Women Graduate Students and Recent PhDs. **Deadline has passed** **w** <https://sites.google.com/site/awmmath/programs/workshops/ICIAM-workshop>

July 18–22: Vancouver, Canada. ICIAM 2011: 7th International Congress on Industrial and Applied Mathematics **w** <http://www.iciam2011.com/>

 July 30 – August 4: Miami Beach, Florida. IMS Annual Meeting at JSM2011. **w** <http://amstat.org/meetings/jsm/2011/>

Miami, location of JSM 2011 and IMS Annual Meeting

August 2011

August 1–4: Boulder, Colorado, USA. Uncertainty Quantification in Scientific Computing. **w** <http://www.nist.gov/itl/math/ifip-woco-10.cfm>

August 1–5: Sandbjerg Estate, Sønderborg, Denmark. Conference in Honour of Søren Asmussen: New Frontiers in Applied Probability **w** www.thiele.au.dk/asmussen

August 11–13: University of Connecticut, Storrs, USA. 46th Actuarial Research Conference. **w** <http://www.math.uconn.edu/~valdez/46arc/46arc-storrs.php>

 August 17–19: Copenhagen, Denmark. Dynamic Statistical Models [this is an ISI Satellite Meeting] **w** <http://statistics.ku.dk/isi-satellite/>

 August 21–26: Dublin, Ireland. ISI Dublin: 58th World Statistics Congress **w** www.isi2011.ie

 August 29 – September 1: Washington DC, USA. 7th International Conference on Multiple Comparison Procedures **w** <http://www.mcp-conference.org>

September 2011

September 5–9: Lisbon, Portugal. 17th European Young Statisticians Meeting **w** <http://www.fct.unl.pt/17eysm>

International Calendar *continued*

September 12 – December 16: Institute for Pure and Applied Mathematics, Los Angeles, USA. **Mathematical and Computational Approaches in High-Throughput Genomics** **w** www.ipam.ucla.edu/programs/gen2011/

December 2011

 December 28–30: Colombo, Sri Lanka. **International Statistics Conference 2011**. **w** TBC

December 28–31: Hong Kong, China. **International Conference on Advances in Probability and Statistics Theory and Applications: A celebration of N. Balakrishnan's 30 years of contributions to statistics**. **e** icaps2011@gmail.com **w** <http://faculty.smu.edu/ngh/icaps2011.html>

April 2012

 April 1–4: Washington DC, USA. **2012 ENAR/IMS Spring Meetings**. **w** <http://www.enar.org/meetings.cfm>

June 2012

June 3–6: Guelph, Ontario, Canada. **2012 SSC Annual Meeting** **w** TBC

June 23–26: Boston, MA, USA. **ICSA 2012 Applied Statistics Symposium**. **w** TBC

July 2012

 July 9–14: Istanbul, Turkey. **IMS Annual Meeting 2012 in conjunction with 8th World Congress in Probability and Statistics**. **NEW WEBSITE** <http://www.worldcong2012.org/>

 July 29 – August 2: San Diego, California. **JSM2012**.

March 2013

 March 10–13: Orlando, Florida. **2013 ENAR/IMS Spring Meeting**. **w** <http://www.enar.org/meetings.cfm>

August 2013

 August 3–8: Montréal, Canada. **IMS Annual Meeting at JSM2013**. **w** TBC

March 2014

 March 16–19: Baltimore, Maryland. **2014 ENAR/IMS Spring Meeting**. **w** <http://www.enar.org/meetings.cfm>

July 2014

 July 7–11: Sydney, Australia. **2014 IMS Annual Meeting**. **w** TBC

August 2014

 August 2–7: Boston, MA. **JSM2014**. **w** TBC

August 2015

 August 8–13: Seattle, WA. **JSM2015**. **w** TBC

Are we missing something? If you know of any statistics or probability meetings which aren't listed here, please let us know. Email the details to Elyse Gustafson at erg@imstat.org. We'll list them here in the *Bulletin*, and online too, at www.imstat.org/meetings

Membership and Subscription Information

Journals:

The scientific journals of the Institute of Mathematical Statistics are *The Annals of Statistics*, *The Annals of Probability*, *The Annals of Applied Statistics*, *The Annals of Applied Probability*, and *Statistical Science*. The *IMS Bulletin* is the news organ of the Institute.

Individual and Organizational Memberships:

Each individual member receives the *IMS Bulletin* and may elect to receive one or more of the five scientific journals. Members pay annual dues of \$98. An additional amount is added to the dues of members depending on the scientific journal selected as follows: *The Annals of Applied Probability* (\$50), *The Annals of Applied Statistics* (\$50), *The Annals of Probability* (\$50), *The Annals of Statistics* (\$50), and *Statistical Science* (\$30). Of the total dues paid, \$28 is allocated to the *Bulletin* and the remaining amount is allocated among the scientific journals received. **Reduced membership** dues are available to full-time students, new graduates, permanent residents of countries designated by the IMS Council, and retired members. **Organizational memberships** are available to departments, corporations, government agencies and other similar research institutions at \$150 per year. Organizational members may subscribe to the journals at an additional cost.

Individual and General Subscriptions:

Subscriptions are available on a calendar-year basis. Individual subscriptions are for the personal use of the subscriber and must be in the name of, paid directly by, and mailed to an individual. Individual subscriptions for 2010 are available to *The Annals of Applied Probability* (\$153), *The Annals of Applied Statistics* (\$153), *The Annals of Probability* (\$153), *The Annals of Statistics* (\$153), *Statistical Science* (\$123), and *IMS Bulletin* (\$103). General subscriptions are for libraries, institutions, and any multiple-readership use. General subscriptions for 2010 are available to *The Annals of Applied Probability* (\$332), *The Annals of Applied Statistics* (\$235), *The Annals of Probability* (\$355), *The Annals of Statistics* (\$355), *Statistical Science* (\$197), and *IMS Bulletin* (\$90). Airmail rates for delivery outside North America are \$99/title.

The *IMS Bulletin* publishes articles and news of interest to IMS members and to statisticians and probabilists in general, as well as details of IMS meetings and an international calendar of statistical events. Views and opinions in editorials and articles are not to be understood as official expressions of the Institute's policy unless so stated; publication does not necessarily imply endorsement in any way of the opinions expressed therein, and the *IMS Bulletin* and its publisher do not accept any responsibility for them. The *IMS Bulletin* is copyrighted and authors of individual articles may be asked to sign a copyright transfer to the IMS before publication.

The *IMS Bulletin* (ISSN 1544-1881) is published ten times per year in January/February, March, April, May, June, July, August/September, October, November and December, by the Institute of Mathematical Statistics, 3163 Somerset Dr, Cleveland, Ohio 44122, USA. Periodicals postage paid at Cleveland, Ohio, and at additional mailing offices. Postmaster: Send address changes to Institute of Mathematical Statistics, 9650 Rockville Pike, Suite L3503A, Bethesda, MD 20814-3998.

Printed by The Sheridan Press, 450 Fame Avenue, Hanover, PA 17331, USA.

Information for Advertisers

General information: The *IMS Bulletin* and webpages are the official news organs of the Institute of Mathematical Statistics. The *IMS Bulletin*, established in 1972, is published 10 times per year. Circulation is over 5,000 paper copies. The *Bulletin* is also available free online in PDF format at <http://bulletin.imstat.org>, usually posted online about two weeks before mailout. Subscription to the *IMS Bulletin* costs \$90. To subscribe, call 877-557-4674 (US toll-free) or +1 216 295 2340 (international), or email staff@imstat.org. The IMS website, <http://imstat.org>, established in 1996, receives over 30,000 visits per month. Public access is free.

Advertising job vacancies

A single 45-day online job posting costs **\$215.00**. We will also include the basic information about your job ad (position title, location, company name, job function and a link to the full ad) in the *IMS Bulletin* at no extra charge. See <http://jobs.imstat.org>

Advertising meetings, workshops and conferences

Meeting announcements in the *Bulletin* and on the IMS website at <http://imstat.org/meetings> are free. Send them to Elyse Gustafson; see http://www.imstat.org/program/prog_announce.htm

Rates and requirements for display advertising

Display advertising allows for placement of camera-ready ads for journals, books, software, etc. A camera-ready ad should be sent as a grayscale PDF/EPS with all fonts embedded. Email your advert to Audrey Weiss, IMS Advertising Coordinator admin@imstat.org or see <http://bulletin.imstat.org/advertise>

	Dimensions: width x height	Rate
1/8 page	4.93" x 4" (125.2 x 102 mm)	\$215
1/4 page	7.5" x 4" (190 x 102 mm)	\$270
3/8 page	4.93" x 8" (125.2 x 203 mm)	\$325
Full page (to edge, including 1/8" bleed)	8.75" x 11.25" (222 mm x 285.8 mm)	\$380
Full page (within usual <i>Bulletin</i> margins)	7.5" x 9.42" (190 mm x 239.3 mm)	\$380

Deadlines and Mail Dates for *IMS Bulletin*

Issue	Deadline	Online by	Mailed
1: January/February	December 1	December 15	January 1
2: March	February 1	February 15	March 1
3: April/May	March 15	April 1	April 15
4: June/July	May 1	May 15	June 1
5: August	July 1	July 15	August 1
6: September	August 15	September 1	September 15
7: Oct/Nov	September 15	October 1	October 15
8: December	November 1	November 15	December 1

UPDATED

the
next
issue is

**January/
February
2011**

Meeting reports, news
of members, information
and announcements
about conferences, and
jobs around the world.

THE ANNALS of APPLIED STATISTICS

AN OFFICIAL JOURNAL OF THE
INSTITUTE OF MATHEMATICAL STATISTICS

Articles

- Age- and time-varying proportional hazards models for employment discrimination
GEORGE WOODWORTH AND JOSEPH KADANE 1139
- Using linear predictors to impute allele frequencies from summary or pooled genotype data
XIAOQUAN WEN AND MATTHEW STEPHENS 1158
- Modeling hourly ozone concentration fields
YIPING DOU, NHU D. LE AND JAMES V. ZIDEK 1183
- A general statistical framework for dissecting parent-of-origin effects underlying
endosperm traits in flowering plants GENGXIN LI AND YUEHUA CUI 1214
- Small area estimation of the homeless in Los Angeles: An application of cost-sensitive
stochastic gradient boosting BRIAN KRIEGLER AND RICHARD BERK 1234
- Detection of radioactive material entering national ports: A Bayesian approach to radiation
portal data SIDDHARTHA R. DALAL AND BING HAN 1256
- Topological inference for EEG and MEG ... JAMES M. KILNER AND KARL J. FRISTON 1272
- Assessing the protection provided by misclassification-based disclosure limitation methods
for survey microdata NATALIE SHLOMO AND CHRIS SKINNER 1291
- Approaches for multi-step density forecasts with application to aggregated wind power
ADA LAU AND PATRICK MCSHARRY 1311
- Bayesian model search and multilevel inference for SNP association studies
MELANIE A. WILSON, EDWIN S. IVERSEN, MERLISE A. CLYDE,
SCOTT C. SCHMIDLER AND JOELLEN M. SCHILDKRAUT 1342
- Analysis of spatial distribution of marker expression in cells using boundary distance plots
KINGSHUK ROY CHOUDHURY, LIMIAN ZHENG AND JOHN J. MACKRILL 1365
- Poisson point process models solve the "pseudo-absence problem" for presence-only data
in ecology DAVID I. WARTON AND LEAH C. SHEPHERD 1383
- Modeling large scale species abundance with latent spatial processes
AVISHEK CHAKRABORTY, ALAN E. GELFAND, ADAM M. WILSON,
ANDREW M. LATIMER AND JOHN A. SILANDER, JR. 1403
- Optimal designs for random effect models with correlated errors with applications
in population pharmacokinetics HOLGER DETTE, ANDREY PEPELYSHEV
AND TIM HOLLAND-LETTZ 1430
- A smoothing approach for masking spatial data
YUIE ZHOU, FRANCESCA DOMINICI AND THOMAS A. LOUIS 1451
- Prediction-based classification for longitudinal biomarkers ANDREA S. FOULKES,
LIVIO AZZONI, XIAOHONG LI, MARGARET A. JOHNSON, COLETTE SMITH,
KARAM MOUNZER AND LUIS J. MONTANER 1476
- Variable selection and regression analysis for graph-structured covariates with
an application to genomics CAIYAN LI AND HONGZHE LI 1498
- An approach for jointly modeling multivariate longitudinal measurements and discrete
time-to-event data PAUL S. ALBERT AND JOANNA H. SHIH 1517
- Bayesian inference for double Pareto lognormal queues PEPA RAMIREZ-COBO,
ROSA E. LILLO, SIMON WILSON AND MICHAEL P. WIPER 1533
